

## **Quotes from Students that have taken training classes from Keck & Wood, Inc.**

These are a few quotes from students that have attended training classes from Keck & Wood, Inc.

Matthew Robinson – IT Director - Peachtree City, GA – ***Introduction to ArcGIS I & II*** - 1/20/2006

*“Excellent, fantastic, outstanding! Tripp knows his stuff and communicates it well! The courses are well planned and easy to understand. The examples are clear and practical to government use. This is an excellent introduction to ArcGIS. “*

Keith Scott – Fort Gordon Dept. of Public Works and Logistics – ***Introduction to ArcGIS II*** - 8/10/2006

*“Excellent course that will benefit me for years to come. Tripp was a very good instructor. Very knowledgeable and patient. The course materials / lectures and exercises were very easy to follow.”*

Matt Davis - GIS Tech - City of Oxford, MS – ***Introduction to ArcGIS II*** - 12/15/2006

*“Great material that followed up with Intro to GIS I. All the material was relevant to what I needed to know. Thanks ESRI!! Mr. Corbin, the instructor, was very knowledgeable about the software and the procedures that were entailed to use it. Tripp was excellent in his presentation!!”*

David Mckee – GIS Specialist/Inspector – Dawson County, GA – ***Using AutoCAD Data in ArcGIS*** - 01/17/2007

*“The course very organized; being the first time this course was offered I feel the course went smooth. The exercises were very helpful for me throughout the class. The exercises did in deed build on the lectures. I wanted to learn how do bridge the gap between AutoCAD data and ArcGIS GIS data, and I feel this course did that. This class will prove helpful in my day to day GIS work, since we are converting over to ArcGIS right now. I would recommend this class to everyone in the GIS field that has anything to do with any form of AutoCAD data.”*

Lucas Veale – GIS Specialist - Kern & Coleman, LLC – ***Using AutoCAD Data in ArcGIS*** – 02/28/07

*“Tripp has a complete working understanding of CAD and GIS and how they integrate. I now have a better understanding how to use CAD in my GIS instead of just forcing things to work. I can now evaluate a situation and develop a better plan of how to use my given information.”*

Brandon Faye - Fulton County Public Works Dept. – **Using AutoCAD Data in ArcGIS** – 02/28/07

*“Tripp is fantastic. There was no topic discussed that he wasn't completely informed about. If you need any help with moving CAD into ESRI products or just to brush up on your ArcGIS skills, this class can handle it.”*

Angela Heitter - Sr. Urban Planner - City of Atlanta, Bureau of Planning – **Introduction to ArcGIS I** - 8/13/2007

*“The course provided an excellent overview of the new ArcGIS version that will be widely used by our group. The course exercises provided an easy learning method to understand the basic navigation of ArcMap and ArcCatalog.”*

*Mr. Corbin is a great instructor for this course. He is able to break down the lecture topics into manageable pieces of information and if questions arise he is able to go further into clarification. His knowledge is based in an array of specialties regarding surveying, planning, and zoning and is able to apply real-life stories and GIS methodologies relatable to me and my colleagues. Ultimately, Mr. Corbin has indirectly provided me with new ideas on how to apply ArcGIS to my specific field.”*

Dianne Wilson - Assistant GIS Manager - Glynn County GIS – **GIS Training & Support** - 06/29/2007

*“We here at Glynn County GIS wish to express our thanks to Keck & Wood for the excellent job that you have done for us in training and support. The class that you taught for the combined Glynn County and Camden County personnel was one of the best I have attended. We were all very impressed with your company's program and your knowledge and teaching abilities. We all came away feeling very confident in using the ArcInfo software.”*

*In addition, I would like to thank Keck & Wood for the continued support after the class. You have answered questions almost every week and helped me to be able to increase my capabilities with ESRI software.”*
